SUMMARY

Software Engineer with full-stack development experience across React, TypeScript, Node.js, and FastAPI, backed by PostgreSQL and Supabase, gained through internships and independent projects. Designs and ships REST APIs, authentication systems, and relational database schemas end-to-end. Works as an AI engineering specialist as a secondary focus, building Retrieval-Augmented Generation pipelines and multi-agent LLM systems with LangChain and LangGraph for production chatbot and assessment platforms.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, C++

Frontend: React, Next.js, Redux Toolkit, Zustand, Tailwind CSS, shadcn/ui, Radix UI, Chart.js

Backend: Node.js, Bun, Express, Elysia, Hono, FastAPI, REST APIs, WebSockets

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Redis, ChromaDB

AI Engineering: LangChain, LangGraph, RAG, LLM Applications, AI Agents, Embeddings, Vector Search, Prompt Engineering

Developer Tools: Git, GitHub, Docker, Razorpay API, JWT Authentication

Engineering Concepts: Data Structures & Algorithms, OOP, Database Design, API Design, System Design, Authentication & Authorization

EXPERIENCE

Full Stack Developer Intern | Dynamicore Strategies

Rajasthan (Hybrid) | May 2026 – Present

- Developed multi-agent orchestration for a financial chatbot across an 18-technology stack spanning FastAPI, LangGraph, LangChain, and Redis.
- Implemented Retrieval-Augmented Generation (RAG) and agentic memory for contextual, multi-turn conversations; built specialist agents and a routing Supervisor with LLM-based reasoning, deterministic Python compliance gates, and model fine-tuning to handle user intent classification and compliance checks.

Full Stack Engineer Intern | The Learner's Academy

Rajasthan (Remote) | Jan 2026 – May 2026

- Built a school management system with a multi-identity RBAC architecture using a 12-technology stack including React, Elysia, Bun, and Supabase.
- Implemented academic year scoping and attendance monitoring across student and teacher modules; developed result publishing with historical term data and a parent dashboard for progress tracking.

Front-End Developer Intern | Dynamicore Strategies

Rajasthan (Remote) | May 2025 – June 2025

- Built a fintech platform frontend across 8 technologies, covering real-time portfolio tracking, an investment explorer, live market data, loan comparison tools, KYC integration flows, and gamified financial-literacy learning modules using React, TypeScript, and Chart.js.
- Implemented a responsive, mobile-first UI using shadcn/ui, Radix UI, and Tailwind CSS.

Data Visualization Intern | Aunwesh Knowledge Tech

Kolkata (On-site) | May 2024 – June 2024

- Analyzed Kaggle datasets and built interactive dashboards using Tableau, alongside Java-based CRUD operations against MySQL via JDBC for dataset management.
- Built data-visualization web tools using Vega-Lite and jQuery/AJAX across 4 chart types (bar, line, pie, time-series).

PROJECTS

Trajectory | AI-Powered Career Guidance System

- Engineered a Retrieval-Augmented Generation pipeline with FastAPI, LangChain, and ChromaDB, including document loading, chunking, and embedding generation via sentence-transformers; built an AI career assistant that combines psychometric assessment results with retrieved job/education data to generate personalized learning roadmaps.

- Designed a Node.js/Express/Supabase backend and a React frontend across a 16-technology stack, including Redux Toolkit, Chart.js, and react-d3-tree for interactive roadmap visualization.

Suvidha | AI-Powered Healthcare Ecosystem

[Code](#)

- Engineered an AI healthcare platform with React, Bun/Hono, PostgreSQL, Redis, and BullMQ, implementing priority queues, 1-min waitlist allocation, real-time notifications, access controls, webhooks, and event-driven scheduling.
- Built multimodal AI for medical image analysis, TTS/STT, health insights, and WhatsApp assistance using 250K+ medicine records; implemented caching, rate limiting, streaming, and 10 compliance controls for observability.

4-in-a-Row | Real-Time Multiplayer Game

[Code](#)

- Engineered a real-time multiplayer game using React, Bun/Fastify, Socket.io, Redis, and PostgreSQL, implementing matchmaking, reconnection, move timers, persistent history, leaderboards, and JWT authentication.
- Built a TypeScript game engine with Minimax, alpha-beta pruning, and bitboards; integrated a Python/FastAPI AI assistant with Pydantic, Ollama, REST/SSE, and Redis for grounded, streaming hints.

Ryder | Car Rental Platform

- Designed a 5-table relational PostgreSQL schema (users, owners, cars, car_rentals, car_bookings) supporting real-time car search, filtering, and availability across an 11-technology stack.
- Implemented JWT httpOnly-cookie authentication with role-based routing for separate user and owner flows; integrated Razorpay payment order creation and signature validation, and automated booking-status updates via a daily cron job.

TurfOnTop | Turf Booking Platform

- Built a RESTful Express.js API across a 16-technology stack with JWT authentication supporting real-time turf slot booking and dynamic availability updates.
- Integrated Razorpay payments, a Weather API for slot-time conditions, and Cloudinary for image/document storage.

EDUCATION

B.Tech in Computer Science

JK Lakshmipat University, Rajasthan

2022–2026 | CGPA: 7.5/10

High School Diploma, Mathematics and Computer Science

Delhi Public School, Jaipur, Rajasthan

Apr 2021 – Apr 2022 | 88%

RESEARCH & PUBLICATIONS

Decentralized Carbon Markets: Blockchain-Enabled Carbon Credit Exchange | IEEE | *Published April 2026*

- Co-authored research addressing inefficiency, lack of transparency, and limited accessibility in offline carbon credit trading through a blockchain-based decentralized exchange design; [available here](#).
